

Preliminary Ecological Appraisal

Project	Kestrel Valley Link Road
Document	KVL-ADM-700-RP-E-0005
Revision	P01
Status	FI - For information
Date	19 April 2024
Originator	Arden Moss Consulting Engineers

Rev	Date	Description
P01	19/04/2024	First issue

1 Introduction

A preliminary ecological appraisal of the route corridor, based on a desk study and an extended Phase 1 habitat survey in March 2024.

2 Findings

The corridor is mainly improved grassland and arable land, with hedgerows, a woodland strip near the River Kest and two field ponds. The field ponds have potential for great crested newts, and further surveys are recommended.

Several mature trees near Mill Lane have bat roost potential.
